List of changes from 1.0.0 to 1.1.0

Improvements

Added Explore page, where device file system can be browsed side-by-side with the computer file system in a two-column layout.

Bi-directional sample transfers now supported, meaning sample files can be transferred also from device to computer (for backup purposes).

Device files and folders can now be renamed and deleted from Transfer. Deletion of non-empty folders is also supported.

Transfer can now be connected to multiple devices simultaneously, for device-to-device transfers (using the Explore page).

Transfers are faster.

UI polished for improved clarity and usability.

Bug fixes

When dropping folders and zip files onto Transfer, only .wav files would be added to transfer list. Other supported file types such as .aiff would be ignored.

Transfer jobs would sometimes stop prematurely.

CPU usage was very high in certain states.
